Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1879 Excerpt: .found to contain about 80 per cent, of the shields of foraminifera, and many of these are almost identical in species with those whose shields make up so large a percentage of the chalk. We are, therefore, warranted in supposing that the chalk has been formed in the same manner as the ooze now forming in the Atlantic. 101. The Tertiary Rocks.--The Tertiary rocks include all those between the chalk and the close of the Boulder drift period. They are usually divided into the Eocene, Miocene, Pliocene, and Pleistocene. These groups are distinguished by the percentage of existing shells which are found in their strata. During the deposition of the first three of these groups, the climate seems to have been gradually changing in the northern hemisphere, from a subtropical to a cold, temperate climate This is proved by the fossil remains which are found in...
