An ammeter which indicates the current taken by a motor is also a valuable piece of equipment as it enables the operator to detect any unusual distress in the motor. From the standpoint of the apparatus itself an ammeter is just as important to the well being of a motor as a steam gage is to the well being of a steam boiler. Damage from lightning need be guarded against only when the pumping plant is at some distance from the power house, and is of prime importance only where power is secured from a transmission line. The damage due to a lightning discharge entering a plant may vary all the way from a breakdown of the insulation in one or more coils of a motor to complete destruction of the electrical equipment. Reliable lightning arrester...
